

AEP-004

Selection Gate Standard

Promote only what proved itself

Version 1.1 Institutional Edition · Proof Gradient / Agent Evolution Protocol

Purpose

AEP-004 defines the Selection Gate: the propagation boundary that decides whether a candidate artifact, workflow, policy, tool, evaluation, context recipe, model route, agent behavior, or capability may be promoted, canaried, revised, rejected, archived, rolled back, or held for more evidence.

Canonical Law

- No proof, no evolution.
- No eval, no propagation.
- No rollback, no release.

Gate Decisions

- promote
- approve_canary
- revise
- reject
- archive
- rollback
- needs_more_evidence

What the Gate Checks

- Evidence sufficiency
- Evaluation sufficiency
- Policy sufficiency
- Risk sufficiency
- Cost and latency sufficiency
- Approval sufficiency
- Challenge sufficiency
- Rollout sufficiency
- Rollback sufficiency
- Claim-boundary sufficiency

Public Line

AEP-001 defines the protocol. AEP-002 defines the docket. AEP-003 defines the packet. AEP-004 defines the gate. GoalOS promotes only what proved itself.
