

AEP-005

Tool Permission Standard

Scoped, approved, leased, revocable, and provable tool use

Version 1.1 Institutional Edition · Proof Gradient / Agent Evolution Protocol

Purpose

AEP-005 defines the governance layer that determines whether an agent, workflow, model route, human operator, or automated system may use a tool, under what scope, for how long, with which approvals, what evidence must be recorded, and what rollback or compensation path is required.

Canonical Law

- No tool without permission.
- No action without scope.
- No high-risk tool without approval.
- No side effect without receipt.
- No irreversible action without rollback or compensation.
- No permanent authority without expiration.
- No proof, no evolution.

Permission Classes

none · read · draft · transform · write · execute · external_contact · send · delete · deploy · payment · secret_access · admin_change · protected_operation · break_glass

Core Objects

- Tool Manifest
- Tool Permission Policy
- Tool Request
- Tool Permission Decision
- Permission Lease
- Approval Receipt
- Tool Call Receipt
- Revocation Receipt
- Compensation Receipt
- Break-Glass Request

Public Line

AEP-001 defines the protocol. AEP-002 defines the docket. AEP-003 defines the packet. AEP-004 defines the gate. AEP-005 defines the permission. GoalOS allows only what is scoped, approved, leased, revocable, and provable.
