

AEP-007

Public-Safe Proof Report Standard

Public proof without private leakage

Version 1.2 Institutional Edition · Proof Gradient / Agent Evolution Protocol

Purpose

AEP-007 defines the reporting layer that converts private or protected machine-work evidence into a public-safe proof report that can be shared without leaking private or protected material.

Canonical Law

- No public claim without claim boundary.
- No public proof without redaction review.
- No private trace in public report.
- No protected data in public proof.
- No publication without approval.
- No correction without history.
- No proof, no evolution.

Disclosure Classes

public · private · protected · forbidden · embargoed

Public Claim Levels

verified · supported · observed · contextual · not_claimed

Core Objects

- Report Manifest
- Source Evidence References
- Public Claim Matrix
- Evidence Summary
- Evaluation Summary
- Redaction Ledger
- Publication Approval
- Correction / Retraction Policy
- Challenge Record
- Final Claim Boundary

Public Line

GoalOS proves publicly without leaking privately.
